

Arduino Relay Control Code

```
#include <SoftwareSerial.h>

SoftwareSerial esp(10, 11);

#define RELAY_PIN 7

void setup() {
    Serial.begin(9600);
    esp.begin(9600);
    pinMode(RELAY_PIN, OUTPUT);
    digitalWrite(RELAY_PIN, HIGH);
    Serial.println("Arduino Ready");
}

void loop() {
    if (esp.available()) {
        char c = esp.read();

        Serial.print("Received: ");
        Serial.println(c);

        if (c == '0') {
            digitalWrite(RELAY_PIN, LOW);
            Serial.println("Relay ON");
        }

        if (c == 'F') {
            digitalWrite(RELAY_PIN, HIGH);
            Serial.println("Relay OFF");
        }
    }
}
```
